

Ghazanfar Institute

Current existing systems

- Excel spreadsheet for student and teachers' data management.
- Student management system (Developed using ASP.Net old versions). The system currently is not under implementation and use by the institute officials due to the old technology used in the MIS.

Required Systems

- They strongly desired the development of a new system using new software development technologies for students, curriculum and teachers' data management.
- The system must have excel import ability for importing the records of previous students from the past decades from Ms. Excel spreadsheets.
- Considering final and 20% examinations of the institute on the development of the new MIS.
- Considering 1 year, 2 years and 3 year educational cycles of faculties (technicians = 1 year, 14th grades = 2 years and 3 years = 15th grade).
- The system must have the automatically print capability of students' ID Card, transcripts and diplomas.
- The system must comprehensively have the ability to handle students' admissions, deferral, academic dismissal, leave, withdrawal, hostel, transfer, attachments and any other students and teachers related staff.
- The above mentioned system must have the transparent and corruption-free ability to track, calculate and manage the

revenue and income that the institute's officials gather from printing certificates and transcripts for students.
